Sharing In early versions of AutoCAD, sharing of drawings was performed by sending them via e-mail. Sharing is now available on a LAN or the Internet. AutoCAD can share its work and even run in the background so that the shared drawings appear on the network. Sharing a drawing requires that a name be given to the drawing, the associated copyright notice and a password. Local folders for saving files can be set as shared. The "Shared by..." option appears in the "Save As" dialog. Any drawing that can be shared will appear in this dialog. AutoCAD automatically uploads the drawing when changes are made. In the "Save As" dialog the name of the shared drawing can be changed as required. A "Do not save" option can be set for such a drawing. The name of the shared drawing file can be changed from the "Save As" dialog. When a drawing is shared, it can only be modified if the "Shared by..." option is unchecked. A drawing will be added to a "Shared Drawings" folder. A list of available drawings is displayed in this folder. The drawings in this folder can be named and organized to provide a history of the drawings and where they were saved. A password can be required for downloading drawings. Workflow The workflow of AutoCAD is depicted in a workflow diagram which appears in the editor, the drawing palette and in the "View" dialog. A drawing is created from a template. The template consists of a title, cross-reference, and drawing elements. For example, the title and cross-reference can be used to insert a drawing into a drawing package. Drawing elements can be inserted into drawings using the "Insert" menu or other features of the drawing toolbar. An overview of the steps that are performed in a drawing is provided by the "About" function. AutoCAD enables users to start from a template or from scratch. If a drawing is started from scratch, its properties are adjusted automatically to reflect any templates used. In AutoCAD 2012, new templates were introduced and can be chosen from a list. Some properties, such as the background, can be set in the drawing template. An AutoCAD user may save drawings to files (usually as DGN files), to drawings on the network (usually as DWG files), or to the server of a CAD bureau. AutoCAD saves a drawing to a file by means of the save function. It a1d647c40b
